DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, 19, 21-22 and 24-28 are drawn to Charging a battery by constant current then constant voltage, classified in class 320, subclass 160.
 - II. Claims 11, and 24-26 are drawn to Battery Equalization, classified in class 320, subclass 117.
 - III. Claims 13-15, 17-18 and 24-26, drawn to a battery pack with diverse cells, classified in class 320, subclass 110.
 - IV. Claim 23 is drawn to Measuring and Testing, classified in class 324, subclass 432.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of groups I-IV are directed to related field of batteries. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, Groups I is directed towards a standard method of charging a battery. Group II is directed towards batteries which equalize by charging a lower voltage battery by discharging a higher voltage battery. Group III is a Battery pack which consists of

cells that contain a different chemical make up. Group IV is a method of measuring chemical polarization difference in a battery over a period of time.

3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
